

Safe Travels

The GPS enabled GO Trek allows freedom and security on the move. Two-way voice contact and 24/7 monitored support means assistance is only a press of a button away.

Key Features:

- **Long battery life** - an industry leading 1-2 months between charges¹.
- **Wireless charging** - charging is performed by simply placing the GO Trek on the supplied charging pad.
- **Fall detection (option)** - advanced technology detects significant impact falls and automatically sends an alert to the Safety Link Response Centre².
- **GPS enabled** - allows Safety Link to receive accurate coordinates to pinpoint the user's location³.
- **Two-way voice** - powerful and clear audio allows Safety Link Call-takers to communicate with users hands-free, when required.
- **Water proof** - rated to IP67.
- **EVE 3+ Medical Alarm System compatible** - allows added levels of redundancy in case of network failure. Also permits the use of additional Safety Link accessories and services, e.g. smoke detectors, extra pendants, Daily Calls etc.

¹ Battery life quoted is in passive, non-emergency mode. Once an alert is triggered, the GO Trek will be operational and battery use increases.

² Fall detection capabilities are an additional level of support only. Not all falls will register an alert, in such instances, the button should be used.

³ Accurate location details and receipt of alerts are wholly dependent on both GPS and cellular network availability.
