

Monitored Smoke Detector

A monitored smoke detector that sends an emergency alert to the Safety link call centre via the medical alarm base unit.

The monitored smoke detector also sounds an audible alarm locally when triggered.

About this product's features:

- 10 year sealed lithium battery.
- 300 metre range back to the medical alarm base unit
- Interconnected
- Photoelectric

When smoke is detected, the sensor will sound an alarm locally to alert the homeowner, sending an immediate activation through to the Safety Link monitoring centre.

The Homeowner can cancel a false activation by pressing the CANCEL button on the base unit, prior to the alert being sent.

Standard installation practice will ensure the smoke detector will be positioned between the client's bedroom and potential sources of fire.

Safety Link's monitored smoke detector provides additional peace-of-mind to at risk clients.
